

Modular Course in Implant Dentistry Level 1 and Level 2 Training

Moor Park Specialist Dental Centre

December 2018 - May 2019

In association with

Introduction

This modular course in implant dentistry is for both clinicians with limited implant experience seeking to incorporate implant treatment into their practice with confidence and those wishing to advance their placement and surgical skills. Joe Bhat and the education team delivering the course have accumulated over 20 years of clinical and teaching experience as well as gaining a reputation for excellence and giving delegates the confidence to place and restore implants using the Neodent® Implant System.

Course aim

This course is designed to provide clinicians with the theoretical and practical skills required to place and restore dental implants to the highest standard, with the aim of delegates gaining the clinical competence needed for the provision of safe and satisfactory dental implant treatment to their patients.

The UK element of this course provides theoretical and hands-on practical sessions on models and live surgery on single tooth and full arch cases all with immediate loading. The course also includes an exceptional trip to ILAPEO, Curitiba in Brazil which offers hands-on training on live patients (see course fee guide).

About the course

The course is led by Joe Bhat, Hon. Visiting Professor and Specialist in Prosthodontics and Oral Surgery, who is a highly-regarded authority on implant dentistry and education. The course is a structured pathway delivered via 5 modules, with Modules 1, 2, 3 and 5 delivered at Moor Park Specialist Dental Centre and Module 4 delivered in ILAPEO, Brazil.

Delegates have an opportunity to experience a range of lectures and hands-on practical sessions in both locations and the opportunity to visit Schoenitz Dental Laboratory to understand more about the immediate and delayed prosthetic provision of implant restorations.

'Joe and the team at Moor Park went out of their way to impart everything they knew about how they work, the systems they have used, and how they get great results with the Neodent system. Joe's vast experience and knowledge of implantology came through in a relaxed open manner with hands-on practical tips from suturing to planning to mock placements. We were able to see implant placement, impression taking and restoration fit "live" on different patients - Joe made sure to show us the various techniques available with the Neodent system. A visit to Schoenitz Dental Lab was invaluable in understanding exactly what is required for a great result. Joe and his amazing team left me with renewed enthusiasm and a feeling of excitement about using the Neodent system going forward'. Dr Lester Aldridge

Course Details

Module 1 Current Principles in Implant Dentistry | **December 6th-7th 2018**

Module 2 The Surgical Module | **January 10th-11th 2019**

Who is this course for?

The course is an invaluable opportunity for experienced GDPs who are looking to develop a private dental practice or to develop a substantial implant referral practice in the future. For delegates who have limited implant experience or who just want to increase their confidence in implant dentistry the course also offers the additional opportunity to understand and experience the following types of cases:

- Straightforward single implants
- Straightforward multiple implants for bridges
- Implants into extractions sockets
- Immediate load protocols for single tooth
- 'One abutment one time' which is unique to this system

For more experienced implant practitioners who wish to take their training to the next level the course offers the additional opportunity to understand and experience the following types of cases:

- Single arch immediate load
- Sinus augmentation with or without simultaneous implant placement

'The facilities and the programme were first class and I believe there is a huge value for someone who is starting out in implants to go to the next level. In my opinion, Joe Bhat is so far the best clinical teacher I have come across in 11 years of dentistry. His knowledge is unsurprisingly good but his manner and his willingness to share all his tricks and tips was truly life-changing'. Dr Mide Ojo
